Communication Made Easy

X-5 Series

The *Series X5*; big brother to our X3 Series offers a world of new possibilities with its new electro-mechanical pad printing machines. Offering servo drives for all three axis, the X5 is available in sealed cup, open ink well and lateral cup configurations.

Teca-Print is pleased to announce the arrival of our new modem options for the X-Series line of machines. Further developments in combination with the advanced technical ability of our new X-Series machines make it possible to utilize the new modem option.

An integrated modem in the machine allows us to access your machine directly via a telephone or ISDN connection. This technology is ideal for solving software problems, loading modified programs or providing program updates.

By using this simple yet efficient transfer method, it is no longer necessary to send memory cards. Thereby saving time, money or even perhaps a costlier visit from our technician.

For more information about our new modems, please feel free to contact us.

You're Invited!!

Its "*easy to use*" design includes a Touch Screen Panel, fast cliché change over with effortless x-, y-, z- directional adjustment system.

In addition, parts can be printed on in different positions, whether it be length, width or depth and within the same print cycle. Program options allow for multiple ink pick up and drop off points, reducing consumable costs and change-over times. Thereby providing customers with one of the most flexible, production cost-reducing machines on the market.

Join our mailing list!

Teca-Print would like you to be our guest at the NPE 2006: International Plastics Showcase. By registering now and as our guest you will be entitled to \$60 off the current registration price of \$90. Hope to see you there.

June 19 - 23, 2006
