

## The Pad of the Future!

Teca-Print is pleased to introduce its new generation of pad; the new **StarX** long life. After an extensive and rigorous phase of development, our new ultra long life pads are ready for the market place.

Our new printing pad has outstanding features for even the most demanding pad printing applications. Such as:

- **Ultra Long Life**
- Immediate Use - No Activation
- Incredible Anti-Static
- Perfect Ink Transfer
- Ultra Resistant

**StarX** is the printing pad that will set itself apart from all others. It delivers fine graphic transfer qualities and will meet and satisfy all the demands of high-volume production.

The mechanical resistance properties of the **StarX** will in many ways resist the effects that normally come as a result of repeated impressions on the same spot. It will also minimize the damage that comes as a result of pad contact with sharp edges, thereby increasing the overall production output of the printing pad.

The composition of the **StarX** pad enables an outstanding print transfer with excellent coverage. The remaining ink on the pads will be reduced to a minimum, if not eliminated altogether.

Lastly, the new **StarX** pads will eliminate swelling on the surface from solvents, ink and repeated pad to part compressions.

---

Contact us today to see if the all new **StarX** pad is right for your application.

Sincerely,

Customer Service Department  
Teca-Print
